

Slow-Mo Mojo

A one-day practical workshop on the art of slow-shutter speed photography. Neutral Density filters and tripods are a must, however, we will also experiment with notions of Intentional Camera Movement (ICM).

Meet at 10:30 outside The RNLI Lyme Regis Lifeboat Station, The Cobb, Lyme Regis DT7 3JJ

What to bring:

Camera and lens(es) that allow complete control of the exposure in manual mode.

Tripod, Cable release, Neutral Density filters.

It's advisable to have a basic understanding of the principles of photography (i.e a familiarity with the relationship between aperture, shutter speed and ISO).

This will be a "whatever-the-weather" workshop and it's in June so bring sunscreen and hat, but also prepare for anything else i.e. waterproofs. Good shoes advisable as there will be a modest amount of coastal walking.
